DESIGNS

Elev8d Designs Hosting & Domain Services

Domain registration, shared website hosting, SSL, email options, and account support for current and approved Elev8d Designs clients.

How the portal is used

This portal is not an open public registration marketplace. Elev8d Designs uses a request-based process so domain, hosting, DNS, SSL, email, billing, and support needs can be reviewed before services are configured.

Common requests

Domain services	New registrations, transfers, renewals, DNS guidance, and ownership support.
Shared hosting	Hosting plans for approved client websites, ministries, nonprofits, authors, and small businesses.
SSL support	Let's Encrypt SSL is included with hosted websites. Additional SSL certificates may be available at additional cost.
Email options	Email setup can be reviewed based on the client's domain, hosting plan, and preferred email path.
Specialized options	VPS/VPN-related options may be available by request at additional cost.
Support	Billing, account, Client Portal, cPanel, DNS, migration, and technical support requests.

Before submitting a service request

- Gather the domain name and registrar access details, if applicable.
- Identify whether the request involves hosting, DNS, SSL, email, cPanel, billing, or migration.
- Include any renewal dates, deadlines, launch dates, or urgent downtime concerns.
- Use the Service Request page to describe the need in one place.

Primary contact

Use the website service request or contact form for the most organized response. Public email links on the website route back to the contact form for spam protection.
